Inelastic neutron scattering applied to the investigation of collective excitations in topologically disordered matter [Condens. Matter Phys., 2008, 11, 1(53), 7]

J.-B.Suck

Received April 22, 2008

Key words: *inelastic neutron scattering, correlation functions, dispersion relations, collective excitations, topologically disordered matter*

PACS: *61.12.Ex, 63.20.Dj, 63.50.+x*

In the above mentioned publication the denominator of the prefactor of equation (31) was unfortunately wrongly given. The equation should read:

$$F(Q,\omega) \approx \left(\frac{2M}{k_B\,T}\mathrm{e}^{2W(Q)}\right)\,\left(\frac{\omega}{Q}\right)^2\,S^{1\mathrm{phon}}(Q,\omega).$$
